

# Environmental policy

## **Law enforcement**

We comply with current laws and regulations applicable to the manufacture of injection molded plastic parts. We work continuously with law monitoring to ensure that we always live up to the requirements that are set.

## **Recycling and reuse**

We work to reduce the use of finite resources through a sustainable use of resources with a high proportion of reuse and recycling of what cannot be reused. We constantly strive to reduce our waste and that the waste we still produce can be reused or recycled to the greatest extent possible. In cases where it is not possible to reuse or recycle, we have an agreement with a waste manager who takes care of the waste in a correct, safe and environmentally friendly way. Our production shall be energy efficient and supplied by renewable energy in order to reduce our emission of greenhouse gases and air pollution.

## **Chemicals**

We work with environmentally and user-friendly chemicals, our goal is to constantly question and challenge chemical use and chemical purchases to constantly reduce the number of chemicals and the amount used to find the best alternative for PE Plast, our employees, customers and the environment.

## **Emissions**

We always strive to have a way of working that has no impact on nature. We have routines that ensure that neither water nor land is damaged in the event of an incident. Our business have no processes with emissions that directly affect our local environment, neither from production nor operation of the property

## **Purchase**

We constantly work to purchase environmentally friendly products and actively work with our customers to use environmentally friendly and/or recycled raw materials. We also manage our purchases to be environmentally friendly both with regard to the quantity we buy so that we do not buy more than we need but also so that the number of transports is kept down as much as possible.

## **Management and improvements**

Our environmental work permeates the entire company from the decisions and how the management works to how the production staff work and their conditions. We have ongoing improvement work and systematically strive to constantly improve our environmental performance

Environmental goals and improvement programs are continuously updated. These are based on environmental aspects, applicable environmental legislation, technical possibilities, financial conditions and demands from customers and other stakeholders.
